

# TEMPERATURE CONTROLS

## REMOTE / DIRECT SENSING

Type LWS, FWS, RWS & EWS

SAGINOMIYA

### GENERAL DESCRIPTION

- Most suitable model can be selected from the variations of wide temperature range with either adjustable or fixed differential. Narrow differential is further advantageous.
- Sensing elements are air sensed and liquid sensed type depending on control media. Also, sensing element can be selected from remote or direct type depending on application.
- Single pole double throw contacts allows use for either heating or cooling application, with large contact rating as well.
- Adjusting mechanism is driver adjusting type as standard on delivery, but a knob assembly and a concealed plate are also supplied as standard accessories.

- Manual Reset Models of LWS-C1030F and LWS-C1060F for low limit application are available upon request.
- Knob assembly and control plate are supplied as standard accessories.

Type FWS—Air Sensed type with standard remote sensing element.

Unit: °C

CONTACT STYLE

Models "set high"

The dial indicates the high switch point (© - © close, © - © open).

The low switch point (© - © open, © - © close) is obtained by deducting the differential from the high switch point.

Arrow mark indicates a direction of switch action on temperature increase.
